INDEX TO AUTHORS

A

Adelberg, Edward A. See *Umbarger and Adelberg,* 883

Ajl, Samuel J. See *Barban and Ajl,* 63

Alburn, Harvey E., and **Whitley, Robert W.** Factors affecting the assay of hyaluronidase, 379

Alexander, George V., Nusbaum, Ralph E., and **MacDonald, Norman S.** The boron and lithium content of human bones, 489

Anderson, Jean T. See *Lee, Anderson, Miller, and Williams,* 733

Archer, J. G. See *Ross, Ely, and Archer,* 561

B

Banerjee, Sachchidananda. See *Ghosh, Deb, and Banerjee,* 867

Barban, Stanley, and **Ajl, Samuel J.** Interconversion of propionate and succinate by *Propionibacterium pentosaceum,* 63

Beerstecher, Ernest, Jr., and **Edmonds, Eleanor J.** The mechanism of the tryptophanase reaction, 497

Beiler, J. M., and **Martin, Gustav J.** The inhibition of xanthine oxidase by flavonoids and related compounds, 831

Bennett, Blair M. See *Way and Bennett,* 335

Berenda, Gladys Dart. See *Hunter,* 701

Binkley, Francis. A note of the specificity of the enzymatic cleavage of thioethers, 209

—, **Christensen, Gerald M.,** and **Wu, Feng Chi.** Metabolism of glutathione. V. An effect of insulin, 29

—, —, and —. VI. Effects of hypophysectomy, 575

Bloch, Konrad. See *Zabin and Bloch,* 261, 267

Bollman, Jesse L. See *Flock, Mann, and Bollman,* 293

Borenfreund, Ellen. See *Dische and Borenfreund,* 583

Boyer, P. D., Rabinovitz, M., and **Liebe, E.** Chemical structure in relation to vitamin E function, 95

Buchanan, Dorothy J., and **Rapoport, S.** A chemical study of the blood group-specific substances found in meconium, 251

Byrne, G. M., Phinney, J. I., Schachter, M., and **Young, E. Gordon.** Electrophoretic and chemical studies of canine pancreatic juice, 683

C

del Campillo, Alice. See *Kaufman, Korkes, and del Campillo,* 301

Carter, Herbert E., Nalbandov, Olga, and **Tavormina, Peter A.** Biochemistry of the sphingolipides. VI. The *O*-methyl ethers of sphingosine, 197

Cason, James, Freeman, N. K., and **Sumrell, Gene.** The principal structural features of C_{27}-phthienoic acid, 415

— and **Sumrell, Gene.** Investigation of a fraction of acids of the phthioic type from the tubercle bacillus, 405

Cerecedo, Leopold R. See *Reddy and Cerecedo,* 57

Chaikoff, I. L. See *Jensen, Chaikoff, and Tarver,* 395

—. See *Strisower, Chaikoff, and Weinman,* 453

Chargaff, Erwin, Lipshitz, Rakoma, Green, Charlotte, and **Hodes, M. E.** The composition of the desoxyribonucleic acid of salmon sperm, 223

—. See *Levine and Chargaff,* 465, 481

Cheng, Amber L. S., Greenberg, Samuel M., Deuel, Harry J., Jr., and **Melnick, Daniel.** Biotin-like activity of posi-

XUM

tional and stereoisomers of octadecenoic acids, 611
Christensen, Gerald M. See *Binkley, Christensen, and Wu*, 29, 575
Cleveland, Doris E. See *Krebs and Wright*, 555
Cohen, Saul L. The hydrolysis of steroid glucuronides with calf spleen glucuronidase, 147
Cohen, Seymour S. See *Weed and Cohen*, 693
Conn, Eric E., and **Vennesland, Birgit.** Glutathione reductase of wheat germ, 17
Coon, Minor J. See *Levy and Coon*, 807
Cooperstein, S. J. See *Wainio, Person, Eichel, and Cooperstein*, 349
Cubiles, Ricardo. See *Schmidt, Cubiles, Zöllner, Hecht, Strickler, Seraidarian, Seraidarian, and Thannhauser*, 715

D

Daus, Margaret A. See *Hirschmann, Daus, and Hirschmann*, 115
Deb, Chandicharan. See *Ghosh, Deb, and Banerjee*, 867
DeBusk, Betty G. See *Reed, DeBusk, Johnston, and Getzendaner*, 851
—. See *Reed, Getzendaner, DeBusk, and Johnston*, 859
Deuel, Harry J., Jr. See *Cheng, Greenberg, Deuel, and Melnick*, 611
Deutsch, H. F. See *Wetter and Deutsch*, 237
Dische, Zacharias, and **Borenfreund, Ellen.** A new spectrophotometric method for the detection and determination of keto sugars and trioses, 583
— and **Shettles, Landrum B.** A new spectrophotometric test for the detection of methylpentose, 579
—. See *Shettles, Dische, and Osnos*, 589
Dittmer, Karl. See *Frieden, Hsu, and Dittmer*, 425
Dorfman, Albert. See *Roseman and Dorfman*, 105

E

Edmonds, Eleanor J. See *Beerstecher and Edmonds*, 497
Eichel, Bertram. See *Wainio, Person, Eichel, and Cooperstein*, 349
Elion, Gertrude B., Hitchings, George H., and **VanderWerff, Henry.** Antagonists of nucleic acid derivatives. VI. Purines, 505
Elliott, Alfred M. See *Hogg and Elliott*, 131
Elvehjem, C. A. See *Gershoff and Elvehjem*, 569
—. See *Williams, Litwack, and Elvehjem*, 73
Ely, J. O. See *Ross, Ely, and Archer*, 561

F

Farber, Milton. See *Rosenkrantz, Milhorat, and Farber*, 9
Feldott, Gladys, and **Lardy, Henry A.** Metabolic functions of biotin. IV. The rôle of carbamyl-L-glutamic acid in the synthesis of citrulline by normal and biotin-deficient rats, 447
Flavin, Martin, and **Graff, Samuel.** The utilization of adenine for nucleic acid biosynthesis by *Tetrahymena geleii*, 485
Flock, Eunice V., Mann, Frank C., and **Bollman, Jesse L.** Free amino acids in plasma and muscle following total removal of the liver, 293
Freeman, N. K. See *Cason, Freeman, and Sumrell*, 415
Frieden, Earl, Hsu, Lien Tien, and **Dittmer, Karl.** Enzymatic degradation of amino acid antagonists, 425

G

Gemmill, Chalmers L. The effect of thyroxine on ascorbic acid oxidation, 749
Gershoff, S. N., and **Elvehjem, C. A.** Studies of the biological effects of methionine sulfoximine, 569
Getzendaner, Milton E. See *Reed, DeBusk, Johnston, and Getzendaner*, 851

Getzendaner, Milton E. See *Reed, Getzendaner, DeBusk, and Johnston*, 859
Ghosh, Naresh Chandra, Deb, Chandicharan, and **Banerjee, Sachchidananda.** Colorimetric determination of epinephrine in blood and adrenal gland, 867
Graff, Samuel. See *Flavin and Graff*, 485
Green, Charlotte. See *Chargaff, Lipshitz, Green, and Hodes*, 223
Greenberg, Samuel M. See *Cheng, Greenberg, Deuel, and Melnick*, 611
Greenstein, Jesse P. See *Meister, Levintow, Kingsley, and Greenstein*, 535
Grossowicz, Nathan. See *Schou, Grossowicz, and Waelsch*, 187

H

Hamilton, Doris M. See *Hehre*, 161
Hanahan, Donald J., Turner, Mildred Becker, and **Jayko, Michael E.** The isolation of egg phosphatidyl choline by an adsorption column technique, 623
Hansen, R. G., Rutter, William J., and **Samuels, Leo T.** The effect of previous diet on the metabolism of glucose by rat diaphragm, 243
Hecht, Liselotte. See *Schmidt, Cubiles, Zöllner, Hecht, Strickler, Seraidarian, Seraidarian, and Thannhauser*, 715
Hehre, Edward J. The biological synthesis of dextran from dextrins, 161
Heppel, Leon A., and **Hilmoe, R. J.** Purification of yeast inorganic pyrophosphatase, 87
Heuser, G. F. See *Yacowitz, Norris, and Heuser*, 141
Hilmoe, R. J. See *Heppel and Hilmoe*, 87
Hirschmann, Frieda B. See *Hirschmann, Daus, and Hirschmann*, 115
Hirschmann, H., Daus, Margaret A., and **Hirschmann, Frieda B.** Chemical interrelationships between some 20-hydroxysteroids, 115
Hitchings, George H. See *Elion, Hitchings, and VanderWerff*, 505
Hodes, M. E. See *Chargaff, Lipshitz, Green, and Hodes*, 223
Hogg, James F., and **Elliott, Alfred M.** Comparative amino acid metabolism of *Tetrahymena geleii*, 131
Horecker, B. L. See *Seegmiller and Horecker*, 175
Horowitz, N. H. See *Thayer and Horowitz*, 755
Hsu, Lien Tien. See *Frieden, Hsu, and Dittmer*, 425
Hunter, F. R. Observations on the use of the flame photometer for analyses of blood, 701

I

Ingle, Dwight J. See *Stetten, Welt, Ingle, and Morley*, 817

J

Jayko, Michael E. See *Hanahan, Turner, and Jayko*, 623
Jensen, Clifford O. See *Sacks and Jensen*, 231
Jensen, D., Chaikoff, I. L., and **Tarver, Harold.** The ethionine-induced fatty liver: dosage, prevention, and structural specificity, 395
Johnston, Patricia M. See *Reed, DeBusk, Johnston, and Getzendaner*, 851
—. See *Reed, Getzendaner, DeBusk, and Johnston*, 859

K

Kallio, R. E. Function of pyridoxal phosphate in desulfhydrase systems of *Proteus morganii*, 371
Kalnitsky, George. See *Kaltenbach and Kalnitsky*, 629, 641
—. See *Shepherd and Kalnitsky*, 1
Kaltenbach, John P., and **Kalnitsky, George.** The enzymatic formation of oxalacetate from pyruvate and carbon dioxide. I, 629
— and —. The enzymatic formation of oxalacetate from pyruvate and carbon dioxide. II, 641
Kaufman, Seymour, Korkes, Seymour,

and **del Campillo, Alice.** Biosynthesis of dicarboxylic acids by carbon dioxide fixation. V. Further study of the "malic" enzyme of *Lactobacillus arabinosus*, 301

Kaufman, Seymour. See *Ochoa and Kaufman*, 313

Kensler, C. J., and **Langemann, H.** The distribution of choline oxidase activity in rat liver, 551

Kingsley, Rembert B. See *Meister, Levintow, Kingsley, and Greenstein*, 535

Knight, C. A. Dinitrophenyl derivatives of some strains of tobacco mosaic virus, 727

Korkes, Seymour. See *Kaufman, Korkes, and del Campillo*, 301

Krebs, Edwin G., and **Wright, Robert R.** The use of antibody to inhibit a particular step in a multienzyme system, 555

L

Lampen, J. O. See *Wang and Lampen*, 339

Langemann, H. See *Kensler and Langemann*, 551

Lardy, Henry A. See *Feldott and Lardy*, 447

—. See *Plaut and Lardy*, 435

Lee, Norman D., Anderson, Jean T., Miller, Ruth, and **Williams, Robert H.** Incorporation of labeled cystine into tissue protein and subcellular structures, 733

Levine, Celia, and **Chargaff, Erwin.** Chromatographic behavior of analogues of the nitrogenous lipide constituents, 481

— and —. Procedures for the microestimation of nitrogenous phosphatide constituents, 465

Levine, Melvin, and **Tarver, Harold.** Studies on ethionine. III. Incorporation of ethionine into rat proteins, 835

Levintow, Leon. See *Meister, Levintow, Kingsley, and Greenstein*, 535

Levy, Louis, and **Coon, Minor J.** The rôle of formate in the biosynthesis of histidine, 807

Lichtenstein, N. See *Volcani, Sicher, and Lichtenstein*, 543

Liebe, E. See *Boyer, Rabinovitz, and Liebe*, 95

Linker, Alfred. See *Meyer, Linker, and Rapport*, 275

—. See *Rapport, Linker, and Meyer*, 283

Lipsett, Marie N., and **Moore, Frederick J.** The effect of adrenalectomy and cortisone treatment on liver metabolism *in vitro*, 743

Lipshitz, Rakoma. See *Chargaff, Lipshitz, Green, and Hodes*, 223

Litwack, Gerald. See *Williams, Litwack, and Elvehjem*, 73

M

MacDonald, Norman S. See *Alexander, Nusbaum, and MacDonald*, 489

Mann, Frank C. See *Flock, Mann, and Bollman*, 293

Martin, Gustav J. See *Beiler and Martin*, 831

Meikleham, Virginia, Wells, Ibert C., Richert, Dan A., and **Westerfeld, W. W.** Liver esterase and xanthine oxidase during protein depletion, 651

Meister, Alton, Levintow, Leon, Kingsley, Rembert B., and **Greenstein, Jesse P.** Optical purity of amino acid enantiomorphs, 535

Melnick, Daniel. See *Cheng, Greenberg, Deuel, and Melnick*, 611

Meyer, Karl, Linker, Alfred, and **Rapport, Maurice M.** The production of monosaccharides from hyaluronic acid by β-glucuronidase, 275

—. See *Rapport, Linker, and Meyer*, 283

Milhorat, Ade T. See *Rosenkrantz, Milhorat, and Farber*, 9

Miller, Ruth. See *Lee, Anderson, Miller, and Williams*, 733

Moore, Frederick J. See *Lipsett and Moore*, 743

Moore, Stanford, and **Stein, William H.** Chromatography of amino acids on sulfonated polystyrene resins, 663

Morley, Erving H. See *Stetten, Welt, Ingle, and Morley*, 817

N

Nalbandov, Olga. See *Carter, Nalbandov, and Tavormina,* 197

Norris, L. C. See *Yacowitz, Norris, and Heuser,* 141

Novelli, G. David, and **Schmetz, Frank J., Jr.** An improved method for the determination of pantothenic acid in tissues, 181

Nusbaum, Ralph E. See *Alexander, Nusbaum, and MacDonald,* 489

O

Ochoa, Severo, and **Kaufman, Seymour.** Biosynthesis of dicarboxylic acids by carbon dioxide fixation. VI. Isolation of malic acid, 313

Osnos, Martha. See *Shettles, Dische, and Osnos,* 589

P

Person, P. See *Wainio, Person, Eichel, and Cooperstein,* 349

Phinney, J. I. See *Byrne, Phinney, Schachter, and Young,* 683

Plaut, G. W. E., and **Lardy, Henry A.** Enzymatic incorporation of C^{14}-bicarbonate into acetoacetate in the presence of various substrates, 435

Plazin, John. See *Van Slyke, Steele, and Plazin,* 769

R

Rabinovitz, M. See *Boyer, Rabinovitz, and Liebe,* 95

Rapoport, S. See *Buchanan and Rapoport,* 251

Rapport, Maurice M., Linker, Alfred, and **Meyer, Karl.** The hydrolysis of hyaluronic acid by pneumococcal hyaluronidase, 283

—. See *Meyer, Linker, and Rapport,* 275

Reddy, D. V. N., and **Cerecedo, Leopold R.** Nucleic acid changes in the mouse during gestation, 57

Reed, Lester J., DeBusk, Betty G., Johnston, Patricia M., and **Getzendaner, Milton E.** Acetate-replacing factors for lactic acid bacteria. I. Nature, extraction, and distribution, 851

—, **Getzendaner, Milton E., DeBusk, Betty G.,** and **Johnston, Patricia M.** Acetate-replacing factors for lactic acid bacteria. II. Purification and properties, 859

Richert, Dan A., and **Westerfeld, W. W.** A bioassay procedure for the dietary factor related to xanthine oxidase, 49

—. See *Meikleham, Wells, Richert, and Westerfeld,* 651

—. See *Westerfeld and Richert,* 35

Roseman, Saul, and **Dorfman, Albert.** The determination and metabolism of gentisic acid, 105

Rosenkrantz, Harris, Milhorat, Ade T., and **Farber, Milton.** Counter-current distribution in identification of tocopherol compounds in feces, 9

Ross, M. H., Ely, J. O., and **Archer, J. G.** Alkaline phosphatase activity and pH optima, 561

Rutter, William J. See *Hansen, Rutter, and Samuels,* 243

S

Sacks, William, and **Jensen, Clifford O.** Malease, a hydrase from corn kernels, 231

Samuels, Leo T. See *Hansen, Rutter, and Samuels,* 243

Schachter, M. See *Byrne, Phinney, Schachter, and Young,* 683

Schayer, Richard W. The metabolism of adrenalin containing isotopic carbon, 875

Schmetz, Frank J., Jr. See *Novelli and Schmetz,* 181

Schmidt, Gerhard, Cubiles, Ricardo, Zöllner, Nepomuk, Hecht, Liselotte, Strickler, Nancy, Seraidarian, Krikor, Seraidarian, Maria, and **Thannhauser, S. J.** On the action of ribonuclease, 715

Schou, Mogens, Grossowicz, Nathan, and **Waelsch, Heinrich.** Inhibition and activation of glutamo- and aspartotransferases, 187

Seegmiller, J. E., and **Horecker, B. L.** The synthesis of glucose-6-phosphate and 6-phosphogluconate, 175

Seraidarian, Krikor. See *Schmidt, Cubiles, Zöllner, Hecht, Strickler, Seraidarian, Seraidarian, and Thannhauser,* 715

Seraidarian, Maria. See *Schmidt, Cubiles, Zöllner, Hecht, Strickler, Seraidarian, Seraidarian, and Thannhauser,* 715

Shemin, David, and **Wittenberg, Jonathan.** The mechanism of porphyrin formation. The rôle of the tricarboxylic acid cycle, 315

Shepherd, James A., and **Kalnitsky, George.** Intracellular distribution of the phosphate-activated glutaminase of rat liver, 1

Shettles, Landrum B., Dische, Zacharias, and **Osnos, Martha.** Neutral mucopolysaccharide of the human cervical mucus, 589

—. See *Dische and Shettles,* 579

Sicher, Sarah. See *Volcani, Sicher, and Lichtenstein,* 543

Sizer, Irwin W., and **Wagley, Philip F.** The action of tyrosinase on thrombin, fibrinogen, and fibrin, 213

Smiley, Rosa L. See *Schayer,* 875

Steele, Robert. See *Van Slyke, Steele, and Plazin,* 769

Stein, William H. See *Moore and Stein,* 663

Stetten, DeWitt, Jr., Welt, Isaac D., Ingle, Dwight J., and **Morley, Erving H.** Rates of glucose production and oxidation in normal and diabetic rats, 817

Strickler, Nancy. See *Schmidt, Cubiles, Zöllner, Hecht, Strickler, Seraidarian, Seraidarian, and Thannhauser,* 715

Strisower, E. H., Chaikoff, I. L., and **Weinman, E. O.** Conversion of C^{14}-palmitic acid to glucose. I. Normal and diabetic rats, 453

Stumpf, P. K. See *Tewfik and Stumpf,* 519, 527

Sumrell, Gene. See *Cason, Freeman, and Sumrell,* 415

—. See *Cason and Sumrell,* 405

Szent-Györgyi, Andrew G. A new method for the preparation of actin, 361

T

Tarver, Harold. See *Jensen, Chaikoff, and Tarver,* 395

—. See *Levine and Tarver,* 835

Tavormina, Peter A. See *Carter, Nalbandov, and Tavormina,* 197

Tewfik, S., and **Stumpf, P. K.** Carbohydrate metabolism in higher plants. IV. Observations on triose phosphate dehydrogenase, 519

— and —. V. Enzymic oxidation of fructose diphosphate, 527

Thannhauser, S. J. See *Schmidt, Cubiles, Zöllner, Hecht, Strickler, Seraidarian, Seraidarian, and Thannhauser,* 715

Thayer, Philip S., and **Horowitz, N. H.** The L-amino acid oxidase of *Neurospora,* 755

Turner, Mildred Becker. See *Hanahan, Turner, and Jayko,* 623

U

Umbarger, H. Edwin, and **Adelberg, Edward A.** The rôle of α-keto-β-ethylbutyric acid in the biosynthesis of isoleucine, 883

V

VanderWerff, Henry. See *Elion, Hitchings, and VanderWerff,* 505

Van Slyke, Donald D., Steele, Robert, and **Plazin, John.** Determination of total carbon and its radioactivity, 769

Vennesland, Birgit. See *Conn and Vennesland,* 17

Volcani, Benjamin E., Sicher, Sarah, and **Lichtenstein, N.** The action of hydroxylated phenylalanines on the growth of bacteria, 543

W

Waelsch, Heinrich. See *Schou, Grossowicz, and Waelsch,* 187

Wagley, Philip F. See *Sizer and Wagley,* 213

Wainio, W. W., Person, P., Eichel, Bertram, and **Cooperstein, S. J.** The reaction between cytochrome oxidase and ferrocytochrome *c*, 349

Wang, T. P., and **Lampen, J. O.** The cleavage of adenosine, cytidine, and xanthosine by *Lactobacillus pentosus*, 339

Way, E. Leong, and **Bennett, Blair M.** Rapid estimation of theoretical counter-current distribution values, 335

Weed, Lawrence L., and **Cohen, Seymour S.** The utilization of host pyrimidines in the synthesis of bacterial viruses, 693

Weinman, E. O. See *Strisower, Chaikoff, and Weinman*, 453

Wells, Ibert C. See *Meikleham, Wells, Richert, and Westerfeld*, 651

Welt, Isaac D. See *Stetten, Welt, Ingle, and Morley*, 817

Westerfeld, W. W., and **Richert, Dan A.** Liver and intestinal xanthine oxidases in relation to diet, 35

—. See *Meikleham, Wells, Richert, and Westerfeld*, 651

—. See *Richert and Westerfeld*, 49

Wetter, L. R., and **Deutsch, H. F.** Immunological studies on egg white proteins. IV. Immunochemical and physical studies of lysozyme, 237

Whitley, Robert W. See *Alburn and Whitley*, 379

Williams, J. N., Jr. Further studies on choline oxidase factors, 81

—, **Litwack, Gerald,** and **Elvehjem, C. A.** Studies on rat liver choline oxidase: an assay method, 73

Williams, Robert H. See *Lee, Anderson, Miller, and Williams*, 733

Windsor, Emanuel. α-Aminoadipic acid as a constituent of a corn protein, 595

—. α-Aminoadipic acid as a precursor to lysine in *Neurospora*, 607

Yacowitz, H., Norris, L. C., and **Heuser, G. F.** Evidence for an interrelationship between vitamin B_{12} and pantothenic acid, 141

Young, E. Gordon. See *Byrne, Phinney, Schachter, and Young*, 683

Z

Zabin, Irving, and **Bloch, Konrad.** Studies on the utilization of isovaleric acid in cholesterol synthesis, 267

— and —. The utilization of butyric acid for the synthesis of cholesterol and fatty acids, 261

Zöllner, Nepomuk. See *Schmidt, Cubiles, Zöllner, Hecht, Strickler, Seraidarian, Seraidarian, and Thannhauser*, 715

INDEX TO SUBJECTS

A

Acetate: Oxal-. *See* Oxalacetate
-Replacing factors, lactic acid bacteria, *Reed, DeBusk, Johnston, and Getzendaner,* 851
Reed, Getzendaner, DeBusk, and Johnston, 859
Acetoacetate: Carbon 14-bicarbonate incorporation, enzymatic, *Plaut and Lardy,* 435
Actin: Preparation, *Szent-Györgyi,* 361
Adenine: Nucleic acid biosynthesis by *Tetrahymena geleii,* use, *Flavin and Graff,* 485
Adenosine: Cleavage, *Lactobacillus pentosus, Wang and Lampen,* 339
Adipic acid: α-Amino-. *See* Aminoadipic acid
Adrenal(s): Epinephrine determination, colorimetric, *Ghosh, Deb, and Banerjee,* 867
Adrenalectomy: Liver metabolism *in vitro,* effect, *Lipsett and Moore,* 743
Adrenalin: Isotopic carbon-containing, metabolism, *Schayer,* 875
Alanine: Phenyl-. *See* Phenylalanine
Amino acid(s): Antagonists, enzymatic degradation, *Frieden, Hsu, and Dittmer,* 425
Blood plasma, hepatectomy effect, *Flock, Mann, and Bollman,* 293
Chromatography, polystyrene resins, sulfonated, *Moore and Stein,* 663
Enantiomorphs, optical purity, *Meister, Levintow, Kingsley, and Greenstein,* 535
Metabolism, *Tetrahymena geleii, Hogg and Elliott,* 131
Muscle, hepatectomy effect, *Flock, Mann, and Bollman,* 293
Amino acid oxidase: L-, *Neurospora, Thayer and Horowitz,* 755
Aminoadipic acid: α-, corn protein constituent, *Windsor,* 595
Aminoadipic acid—*continued:*
α-, lysine precursor, *Neurospora, Windsor,* 607
Antibody: Enzyme system, effect, *Krebs and Wright,* 555
Apparatus: Flame photometer, blood analysis, use, *Hunter,* 701
Ascorbic acid: Oxidation, thyroxine effect, *Gemmill,* 749
Aspartotransferase: Inhibition and activation, *Schou, Grossowicz, and Waelsch,* 187

B

Bacillus: Tubercle. *See* Tubercle bacillus
See also Lactobacillus, Proteus
Bacteria: Growth, phenylalanines, hydroxylated, effect, *Volcani, Sicher, and Lichtenstein,* 543
Lactic acid, acetate-replacing factors, *Reed, DeBusk, Johnston, and Getzendaner,* 851
Reed, Getzendaner, DeBusk, and Johnston, 859
Viruses, synthesis, host pyrimidines, use, *Weed and Cohen,* 693
See also Propionibacterium, Streptococcus
Bicarbonate: Carbon 14, incorporation into acetoacetate, enzymatic, *Plaut and Lardy,* 435
Biotin: Deficiency, citrulline synthesis, carbamyl-L-glutamic acid rôle, *Feldott and Lardy,* 447
-Like activity, octadecenoic acid isomers, *Cheng, Greenberg, Deuel, and Melnick,* 611
Metabolic functions, *Feldott and Lardy,* 447
Blood: Analysis, flame photometer use, *Hunter,* 701
Epinephrine determination, colorimetric, *Ghosh, Deb, and Banerjee,* 867

XUM

Blood—*continued:*
Group-specific substances, meconium, chemistry, *Buchanan and Rapoport*, 251
Blood plasma: Amino acids, hepatectomy effect, *Flock, Mann, and Bollman*, 293
Bone: Boron, *Alexander, Nusbaum, and MacDonald*, 489
Lithium, *Alexander, Nusbaum, and MacDonald*, 489
Boron: Bone, *Alexander, Nusbaum, and MacDonald*, 489
Butyric acid: Cholesterol synthesis, utilization, *Zabin and Bloch*, 261
Fatty acid synthesis, utilization, *Zabin and Bloch*, 261
α-Keto-β-ethyl-. *See* Keto-β-ethylbutyric acid

C

Carbamyl-L-glutamic acid: Citrulline synthesis, biotin deficiency, rôle, *Feldott and Lardy*, 447
Carbohydrate(s): Metabolism, plants, *Tewfik and Stumpf*, 519, 527
—, —, triose phosphate dehydrogenase, effect, *Tewfik and Stumpf*, 519
Carbon: Determination, *Van Slyke, Steele, and Plazin*, 769
Radioactive, determination, *Van Slyke, Steele, and Plazin*, 769
Carbon dioxide: Fixation, dicarboxylic acid biosynthesis, *Kaufman, Korkes, and del Campillo*, 301
Ochoa and Kaufman, 313
Oxalacetate formation, enzymatic, *Kaltenbach and Kalnitsky*, 629, 641
Carboxylic acid(s): Di-. *See* Dicarboxylic acid
Tri-. *See* Tricarboxylic acid
Cholesterol: Synthesis, butyric acid utilization, *Zabin and Bloch*, 261
—, isovaleric acid utilization, *Zabin and Bloch*, 267
Choline: Phosphatidyl. *See* Phosphatidyl choline
Choline oxidase: Factors, *Williams*, 81
Liver, *Kensler and Langemann*, 551
—, determination, *Williams, Litwack, and Elvehjem*, 73
Citrulline: Synthesis, biotin deficiency, carbamyl-L-glutamic acid rôle, *Feldott and Lardy*, 447
Corn: Malease, *Sacks and Jensen*, 231
Protein, α-aminoadipic acid, *Windsor*, 595
Cortisone: Liver metabolism *in vitro*, effect, *Lipsett and Moore*, 743
Counter-current distribution: Theoretical, determination, *Way and Bennett*, 335
Cystine: Labeled, tissue protein and subcellular structures, incorporation, *Lee, Anderson, Miller, and Williams*, 733
Cytidine: Cleavage, *Lactobacillus pentosus, Wang and Lampen*, 339
Cytochrome: Ferro-. *See* Ferrocytochrome
Cytochrome oxidase: Ferrocytochrome *c* reaction, *Wainio, Person, Eichel, and Cooperstein*, 349

D

Decenoic acid(s): Octa-. *See* Octadecenoic acid
Dehydrogenase: Triose phosphate. *See* Triose phosphate dehydrogenase
Desoxyribonucleic acid: Salmon sperm, *Chargaff, Lipshitz, Green, and Hodes*, 223
Desulfhydrase: Systems, *Proteus morganii*, pyridoxal phosphate function, *Kallio*, 371
Dextran: Dextrin synthesis to, biological, *Hehre*, 161
Dextrin: Dextran synthesis from, biological, *Hehre*, 161
Diabetes: Carbon 14-palmitic acid conversion to glucose, *Strisower, Chaikoff, and Weinman*, 453
Glucose production and oxidation, *Stetten, Welt, Ingle, and Morley*, 817

Diaphragm: Glucose metabolism, diet effect, *Hansen, Rutter, and Samuels,* 243

Dicarboxylic acid(s): Biosynthesis, carbon dioxide fixation, *Kaufman, Korkes, and del Campillo,* 301
Ochoa and Kaufman, 313

Diet: Glucose metabolism, diaphragm, effect, *Hansen, Rutter, and Samuels,* 243
Liver and intestine xanthine oxidase, relation, *Westerfeld and Richert,* 35

Dinitrophenyl derivative(s): Tobacco mosaic virus, *Knight,* 727

E

Egg: Phosphatidyl choline, isolation, adsorption column, *Hanahan, Turner, and Jayko,* 623
White, proteins, immunological studies, *Wetter and Deutsch,* 237

Enzyme(s): Amino acid antagonists, degradation, *Frieden, Hsu, and Dittmer,* 425
Bicarbonate C^{14} incorporation into acetoacetate, use, *Plaut and Lardy,* 435
Fructose diphosphate oxidation, plants, *Tewfik and Stumpf,* 527
Malic. *See* Malic enzyme
Oxalacetate formation from pyruvate and carbon dioxide, *Kaltenbach and Kalnitsky,* 629, 641
System, inhibition, antibody effect, *Krebs and Wright,* 555
Thioethers, cleavage, specificity, *Binkley,* 209
See also Aspartotransferase, Dehydrogenase, etc.

Epinephrine: Adrenals, determination, colorimetric, *Ghosh, Deb, and Banerjee,* 867
Blood, determination, colorimetric, *Ghosh, Deb, and Banerjee,* 867

Esterase: Liver, protein depletion, *Meikleham, Wells, Richert, and Westerfeld,* 651

Ether(s): Thio-. *See* Thioether

Ethionine: *Levine and Tarver,* 835
-Induced fatty liver, *Jensen, Chaikoff, and Tarver,* 395
Proteins, incorporation *in vivo, Levine and Tarver,* 835

F

Fatty acid(s): Synthesis, butyric acid utilization, *Zabin and Bloch,* 261

Feces: Tocopherol, identification, counter-current distribution, use, *Rosenkrantz, Milhorat, and Farber,* 9

Ferrocytochrome: *c*-cytochrome oxidase, reaction, *Wainio, Person, Eichel, and Cooperstein,* 349

Fibrin: Tyrosinase effect, *Sizer and Wagley,* 213

Fibrinogen: Tyrosinase effect, *Sizer and Wagley,* 213

Fish: *See also* Salmon

Flame photometer: Blood analysis, use, *Hunter,* 701

Flavonoid(s): -Related compounds, xanthine oxidase, effect, *Beiler and Martin,* 831
Xanthine oxidase, effect, *Beiler and Martin,* 831

Formate: Histidine biosynthesis, rôle, *Levy and Coon,* 807

Fructose diphosphate: Plants, oxidation, enzymatic, *Tewfik and Stumpf,* 527

G

Gentisic acid: Determination and metabolism, *Roseman and Dorfman,* 105

Gestation: Nucleic acid, *Reddy and Cerecedo,* 57

Gluconate: Phospho-. *See* Phosphogluconate

Glucose: Carbon 14-palmitic acid conversion to, *Strisower, Chaikoff, and Weinman,* 453
— — — — to, diabetes, *Strisower, Chaikoff, and Weinman,* 453
Metabolism, diaphragm, diet effect, *Hansen, Rutter, and Samuels,* 243

Glucose—*continued:*
Production and oxidation, diabetes, *Stetten, Welt, Ingle, and Morley,* 817
Glucose-6-phosphate: Synthesis, *Seegmiller and Horecker,* 175
Glucuronidase: β-, monosaccharide production from hyaluronic acid, use, *Meyer, Linker, and Rapport,* 275
Spleen, steroid glucuronides, hydrolysis, use, *Cohen,* 147
Glutamic acid: Carbamyl-L-. *See* Carbamyl-L-glutamic acid
Glutaminase: Phosphate-activated, liver, intracellular distribution, *Shepherd and Kalnitsky,* 1
Glutamotransferase: Inhibition and activation, *Schou, Grossowicz, and Waelsch,* 187
Glutathione: Metabolism, *Binkley, Christensen, and Wu,* 29, 575
—, hypophysectomy effect, *Binkley, Christensen, and Wu,* 575
—, insulin effect, *Binkley, Christensen, and Wu,* 29
Reductase, wheat germ, *Conn and Vennesland,* 17

H

Hepatectomy: Blood plasma amino acids, effect, *Flock, Mann, and Bollman,* 293
Muscle amino acids, effect, *Flock, Mann, and Bollman,* 293
Histidine: Biosynthesis, formate rôle, *Levy and Coon,* 807
Hyaluronic acid: Hydrolysis, pneumococcal hyaluronidase use, *Rapport, Linker, and Meyer,* 283
Monosaccharide production from β-glucuronidase use, *Meyer, Linker, and Rapport,* 275
Hyaluronidase: Determination, factors affecting, *Alburn and Whitley,* 379
Pneumococcus, hyaluronic acid hydrolysis, *Rapport, Linker, and Meyer,* 283
Hydroxysteroid(s): 20-, chemical interrelationships, *Hirschmann, Daus, and Hirschmann,* 115
Hypophysectomy: Glutathione metabolism, effect, *Binkley, Christensen, and Wu,* 575

I

Insulin: Glutathione metabolism, effect, *Binkley, Christensen, and Wu,* 29
Intestine: Xanthine oxidase, diet relation, *Westerfeld and Richert,* 35
Isoleucine: Biosynthesis, α-keto-β-ethylbutyric acid rôle, *Umbarger and Adelberg,* 883
Isovaleric acid: Cholesterol synthesis, utilization, *Zabin and Bloch,* 267

K

Keto-β-ethylbutyric acid: α-, isoleucine biosynthesis, rôle, *Umbarger and Adelberg,* 883
Keto sugar(s): Determination, spectrophotometric, *Dische and Borenfreund,* 583

L

Lactic acid: Bacteria, acetate-replacing factors, *Reed, DeBusk, Johnston, and Getzendaner,* 851
Reed, Getzendaner, DeBusk, and Johnston, 859
Lactobacillus arabinosus: Malic enzyme, *Kaufman, Korkes, and del Campillo,* 301
Lactobacillus pentosus: Adenosine, cytidine, and xanthosine cleavage, *Wang and Lampen,* 339
Lanthanum: *Streptococcus faecalis* growth and metabolism, effect, *Wurm,* 707
Leucine: Iso-. *See* Isoleucine
Lipide(s): Nitrogenous, analogues, chromatography, *Levine and Chargaff,* 481
Sphingo-. *See* Sphingolipide
Lithium: Bone, *Alexander, Nusbaum, and MacDonald,* 489
Liver: Choline oxidase, *Kensler and Langemann,* 551
— —, determination, *Williams, Litwack, and Elvehjem,* 73

Liver—*continued:*
Esterase, protein depletion, *Meikleham, Wells, Richert, and Westerfeld,* 651
Fatty, ethionine-induced, *Jensen, Chaikoff, and Tarver,* 395
Glutaminase, phosphate-activated, intracellular distribution, *Shepherd and Kalnitsky,* 1
Metabolism *in vitro*, adrenalectomy and cortisone effect, *Lipsett and Moore,* 743
Xanthine oxidase, diet relation, *Westerfeld and Richert,* 35
— —, protein depletion, *Meikleham, Wells, Richert, and Westerfeld,* 651
See also Hepatectomy
Lysine: *Neurospora*, α-aminoadipic acid as precursor, *Windsor,* 607
Lysozyme: Properties, *Wetter and Deutsch,* 237

M

Malease: Corn, *Sacks and Jensen,* 231
Malic acid: Isolation, *Ochoa and Kaufman,* 313
Malic enzyme: *Lactobacillus arabinosus, Kaufman, Korkes, and del Campillo,* 301
Meconium: Blood group-specific substances, chemistry, *Buchanan and Rapoport,* 251
Methionine sulfoximine: Biological effects, *Gershoff and Elvehjem,* 569
Methylpentose: Detection, spectrophotometric, *Dische and Shettles,* 579
Mold: *See also Neurospora*
Monosaccharide(s): Hyaluronic acid production, β-glucuronidase use, *Meyer, Linker, and Rapport,* 275
Mosaic: Tobacco, virus, dinitrophenyl derivatives, *Knight,* 727
Mucopolysaccharide: Neutral, cervix mucus, *Shettles, Dische, and Osnos,* 589
Mucus: Cervix, mucopolysaccharide, neutral, *Shettles, Dische, and Osnos,* 589
Muscle: Amino acids, hepatectomy effect, *Flock, Mann, and Bollman,* 293
See also Diaphragm

N

Neurospora: L-Amino acid oxidase, *Thayer and Horowitz,* 755
α-Aminoadipic acid as lysine precursor, *Windsor,* 607
Nuclease: Ribo-. *See* Ribonuclease
Nucleic acid: Biosynthesis by *Tetrahymena geleii*, adenine use, *Flavin and Graff,* 485
Derivatives, antagonists, *Elion, Hitchings, and VanderWerff,* 505
Desoxyribo-. *See* Desoxyribonucleic acid
Gestation, *Reddy and Cerecedo,* 57

O

Octadecenoic acid(s): Isomers, biotin-like activity, *Cheng, Greenberg, Deuel, and Melnick,* 611
Oxalacetate: Formation, enzymatic, from pyruvate and carbon dioxide, *Kaltenbach and Kalnitsky,* 629, 641
Oxidase: Amino acid. *See* Amino acid oxidase
Choline. *See* Choline oxidase
Cytochrome. *See* Cytochrome oxidase
Xanthine. *See* Xanthine oxidase

P

Palmitic acid: Carbon 14, glucose conversion from, *Strisower, Chaikoff, and Weinman,* 453
— —, — — from, diabetes, *Strisower, Chaikoff, and Weinman,* 453
Pancreatic juice: Electrophoresis and chemistry, *Byrne, Phinney, Schachter, and Young,* 683
Pantothenic acid: Tissue, determination, *Novelli and Schmetz,* 181
Vitamin B_{12} and, interrelationship, *Yacowitz, Norris, and Heuser,* 141

Pentose: Methyl-. *See* Methylpentose
Phenylalanine(s): Hydroxylated, bacterial growth, effect, *Volcani, Sicher, and Lichtenstein*, 543
Phosphatase: Alkaline, activity, hydrogen ion concentration effect, *Ross, Ely, and Archer*, 561
Phosphatide(s): Nitrogenous, determination, micro-, *Levine and Chargaff*, 465
Phosphatidyl choline: Egg, isolation, adsorption column, *Hanahan, Turner, and Jayko*, 623
Phosphogluconate: 6-, synthesis, *Seegmiller and Horecker*, 175
Phthienoic acid: Carbon 27, chemical constitution, *Cason, Freeman, and Sumrell*, 415
Phthioic acid(s): -Like fraction, tubercle bacillus, *Cason and Sumrell*, 405
Pituitary: *See also* Hypophysectomy
Plant(s): Carbohydrate metabolism, *Tewfik and Stumpf*, 519, 527
— —, triose phosphate dehydrogenase, effect, *Tewfik and Stumpf*, 519
Fructose diphosphate oxidation, enzymatic, *Tewfik and Stumpf*, 527
Pneumococcus: Hyaluronidase, hyaluronic acid hydrolysis, *Rapport, Linker, and Meyer*, 283
Polysaccharide: Muco-. *See* Mucopolysaccharide
Porphyrin: Formation, mechanism, *Shemin and Wittenberg*, 315
—, tricarboxylic acid cycle, rôle, *Shemin and Wittenberg*, 315
Pregnancy: *See also* Gestation
Propionate: -Succinate interconversion, *Propionibacterium pentosaceum* effect, *Barban and Ajl*, 63
Propionibacterium pentosaceum: Propionate and succinate interconversion, effect, *Barban and Ajl*, 63
Protein(s): Corn, α-aminoadipic acid, *Windsor*, 595
Depletion, liver esterase and xanthine oxidase, *Meikleham, Wells, Richert, and Westerfeld*, 651
Egg white, immunological studies, *Wetter and Deutsch*, 237
Protein(s)—*continued:*
Ethionine incorporation *in vivo*, *Levine and Tarver*, 835
Subcellular structures, cystine, labeled, incorporation, *Lee, Anderson, Miller, and Williams*, 733
Tissue, cystine, labeled, incorporation, *Lee, Anderson, Miller, and Williams*, 733
Proteus morganii: Desulfhydrase systems, pyridoxal phosphate function, *Kallio*, 371
Protozoa: *See also Tetrahymena*
Purine(s): Derivatives, as antagonists, *Elion, Hitchings, and VanderWerff*, 505
Pyridoxal phosphate: *Proteus morganii* desulfhydrase systems, function, *Kallio*, 371
Pyrimidine(s): Host, bacterial viruses, synthesis, use, *Weed and Cohen*, 693
Pyrophosphatase: Inorganic, yeast, purification, *Heppel and Hilmoe*, 87
Pyruvate: Oxalacetate formation, enzymatic, *Kaltenbach and Kalnitsky*, 629, 641

R

Reductase: Glutathione, wheat germ, *Conn and Vennesland*, 17
Ribonuclease: Action, *Schmidt, Cubiles, Zöllner, Hecht, Strickler, Seraidarian, Seraidarian, and Thannhauser*, 715

S

Salmon: Sperm, desoxyribonucleic acid, *Chargaff, Lipshitz, Green, and Hodes*, 223
Sperm: Salmon, desoxyribonucleic acid, *Chargaff, Lipshitz, Green, and Hodes*, 223
Sphingolipide(s): Biochemistry, *Carter, Nalbandov, and Tavormina*, 197
Sphingosine: *O*-Methyl ethers, *Carter, Nalbandov, and Tavormina*, 197
Spleen: Glucuronidase, steroid glucuronides, hydrolysis, use, *Cohen*, 147

Steroid(s): Hydroxy-. *See* Hydroxysteroid
Steroid glucuronide(s): Hydrolysis, spleen glucuronidase use, *Cohen*, 147
Streptococcus faecalis: Growth and metabolism, lanthanum effect, *Wurm*, 707
Succinate: -Propionate interconversion, *Propionibacterium pentosaceum* effect, *Barban and Ajl*, 63
Sugars(s): Keto. *See* Keto sugar

T

Tetrahymena geleii: Amino acid metabolism, *Hogg and Elliott*, 131
Nucleic acid biosynthesis, adenine use, *Flavin and Graff*, 485
Thioether(s): Cleavage, enzymatic, specificity, *Binkley*, 209
Thrombin: Tyrosinase effect, *Sizer and Wagley*, 213
Thyroxine: Ascorbic acid oxidation, effect, *Gemmill*, 749
Tobacco: Mosaic virus, dinitrophenyl derivatives, *Knight*, 727
Tocopherol: Feces, identification, counter-current distribution, use, *Rosenkrantz, Milhorat, and Farber*, 9
Transferase: Asparto-. *See* Aspartotransferase
Glutamo-. *See* Glutamotransferase
Tricarboxylic acid: Cycle, porphyrin formation, rôle, *Shemin and Wittenberg*, 315
Triose(s): Determination, spectrophotometric, *Dische and Borenfreund*, 583
Triose phosphate dehydrogenase: Carbohydrate metabolism, plants, effect, *Tewfik and Stumpf*, 519
Tryptophanase: Reaction mechanism, *Beerstecher and Edmonds*, 497
Tubercle bacillus: Phthioic acid type fraction, *Cason and Sumrell*, 405
Tyrosinase: Fibrin, effect, *Sizer and Wagley*, 213
Tyrosinase—*continued:*
Fibrinogen, effect, *Sizer and Wagley*, 213
Thrombin, effect, *Sizer and Wagley*, 213

U

Uterus: Cervix mucus, mucopolysaccharide, neutral, *Shettles, Dische, and Osnos*, 589

V

Valeric acid: Iso-. *See* Isovaleric acid
Virus: Bacteria, synthesis, host pyrimidines, use, *Weed and Cohen*, 693
Tobacco mosaic, dinitrophenyl derivatives, *Knight*, 727
Vitamin(s): B_{12}, pantothenic acid and, interrelationship, *Yacowitz, Norris, and Heuser*, 141
C. *See also* Ascorbic acid
E, chemical constitution and function, relation, *Boyer, Rabinovitz, and Liebe*, 95

W

Wheat: Germ, glutathione reductase, *Conn and Vennesland*, 17

X

Xanthine oxidase: Flavonoids and related compounds, effect, *Beiler and Martin*, 831
Liver and intestine, diet relation, *Westerfeld and Richert*, 35
—, protein depletion, *Meikleham, Wells, Richert, and Westerfeld*, 651
-Related factor, bioassay, *Richert and Westerfeld*, 49
Xanthosine: Cleavage, *Lactobacillus pentosus, Wang and Lampen*, 339

Y

Yeast: Pyrophosphatase, inorganic, purification, *Heppel and Hilmoe*, 87
